

CODE BLOCK

Padding, indentation, and repeated spaces should survive extraction and rendering.

```
function renderBlock() {  
  const title = "pre block";  
  return title.padEnd(14, " ");  
}  
  
if (line.startsWith(" ")) {  
  rows.push(line);  
  render("keep spaces");  
}
```

ROTATED PRE

This block is transformed so Firefox uses native line quads instead of the polyfill path.

column A
alpha 01
keep this

SCALED NOTES

Columns rely on fixed-width spacing and should keep their alignment.

column B	column C
beta 02	gamma 03
padding ->	exactly here
