

CODE BLOCK

Padding, indentation, and repeated spaces should survive extra block rendering

```
function renderBlock() {
  const title = "pre  block";
  return title.padEnd(14, " ");
}
```

ROTATED PRE

This block is rotated so Firefox uses native line quads instead of the polyfill path

```
if (line.startsWith("  ")) {
  rows.push(line);
  render("keep  spaces");
}
```

SCALED NOTES

Column is fixed width spacing and should keep their alignment

```
column A      column B      column C
alpha 01      beta  02      gamma 03
  keep this padding ->      exactly here
```
