Complex Clip Paths with `path()`

This demo covers the previously unsupported `clip-path: path(...)` cases: curved paths, compound evenodd windows, and image crops defined by SVG-style path data instead of the basic inset/circle/ellipse/polygon functions.

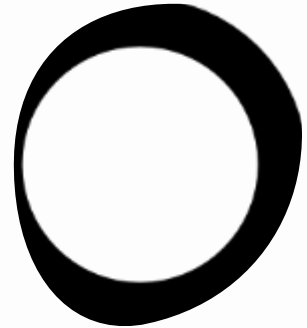

Curved Capsule

A single curved path clipped from a gradient box.

Evenodd Window

A compound `path()` clip with an interior cut-out.

Organic Photo Crop

An image clipped by a curved leaf-like silhouette.

Ticket Notches

A compound path with side cut-outs using the evenodd rule.
