.Net: Update SQL Server vector search to latest VECTOR_SEARCH() syntax #13863

Merged rojimerged 2 commits

Updates the SQL Server vector store connector to support the latest Azure SQL VECTOR_SEARCH() features, matching what was done in EF Core (dotnet/efcore#38075).

Changes

VECTOR_SEARCH syntax update

- Replace deprecated `TOP_N` parameter with `SELECT TOP(N) WITH APPROXIMATE`
- Enable iterative WHERE predicates are now applied during the vector search pro…

Document temporal period properties mapped to CLR properties #5336

Merged rojimerged 2 commits

Documents the new EF Core 11 feature fromdotnet/efcore#38110 that allows temporal period properties (`PeriodStart` / `PeriodEnd`) to be mapped to CLR properties on the entity type, in stead of being restricted to shadow properties.

Changes

`entity-framework/core/providers/sql-server/temporal-tables.md`

- New "Mapping period columns to CLR properties" sec…

build(workspace): bump dev dependencies #1512

Merged peterpeterparkermerged 2 commits

Motivation

We want to stay up-to-date.

Changes

- Update latest dev libs (except typescript, eslint and bindgen - will do those two separatly)

chore(workspace): bump latest eslint and auto fix #1510

Merged peterpeterparkermerged 4 commits

Motivation

We want to use the latest eslint rules.

Changes

- `npm rm @dfinity/eslint-config-oisy-wallet && npm i @dfinity/eslint-config-oisy-wallet -D`
- `npm run format && npm run lint -- --fix`

chore(ci): pin and bump actions/setup-node #1509

Merged peterpeterparkermerged 1 commit

Motivation

Leftover of #1506: similarly as in the referenced PR, we also want to pin the actions used in composites.

Changes

- Bump (since I was already there) and pin `actions/setup-node` v6.3.0

turbopack: cache TransformPlugin in narrow-scoped turbo-tasks functions #92842

Merged sokramerged 3 commits

What?

Refactor all usages of `EcmascriptInputTransform::Plugin(ResolvedVc::cell(Box::new(...) as _))` across `next-core` and `turbopack-tests` so that `TransformPlugin` cells are created inside dedicated `#[turbo_tasks::function]` functions rather than inline at call sites.

Additionally:

- Introduce a `JsonValue` newtype wrapping `serde_json::Value` that imple…

Improve Function.prototype.toString() to return source text for non-native functions #2394

Merged lahmamerged 6 commits

I took a stab at implementing `Function.prototype.toString()` according to the spec. So this is another attempt at what #1726 tried to achieve, it's just takes the correct path instead of trying to convert the AST back to source code.

However, this requires the full source text to be kept around as it would be a performance killer to materialize t…

Fix `aspire start --format json` restart output #16228

Merged sebastienrosmerged 5 commits

Description

Adds restart-path coverage for the existing `aspire start --format json` contract: stdout should remain a single JSON document even when an existing AppHost instance is restarted.

The PR also updates `MultipleAppHostTests` to use `CliInstallStrategy.Detect()` so local ar chive runs exercise the current branch, and it tightens the existing d…

Export remaining ATS Aspire.Hosting APIs #16227

Merged sebastienrosmerged 5 commits

Description

Polyglot guest apphosts were still missing several non-obsolete `Aspire.Hosting` extension methods that exist in the C# surface. This PR closes those ATS export gaps so the generated guest SDKs expose the same supported execution-configuration, Aspire store, and eventing-subscriber workflows as the C# AppHost.

The change adds ATS-speci…

Allow temporal period properties to be mapped to CLR properties #38110

Merged rojimerged 4 commits

Fixes#26463

Summary

Temporal period properties (`PeriodStart` / `PeriodEnd`) were previously required to be shadow properties. This PR removes that restriction, allowing them to be mapped to CLR properties on the entity type.

Changes

Product code

- Removed shadow-property validation in `SqlServerModelValidator` — the `IsShadowProperty()` check on period p…
