CODE BLOCK

Padding, indentation, and repeated spaces should survive extraction and rendering.

```
function renderBlock() {
  const title = "pre  block";
    return title.padEnd(14, " ");
}
```

ROTATED PRE

This block is transformed so Firefox uses native line quads instead of the polyfill path.

```
if (line.startsWith("  ")) {
  rows.push(line);
    render("keep  spaces");
}
```

SCALED NOTES

Columns rely on fixed-width spacing and should keep their alignment.

```
column A    column B    column C
alpha 01    beta  02    gamma 03
  keep this padding ->  exactly here
```
