

## CODE BLOCK

Padding, indentation, and repeated spaces should survive extraction and rendering.

```
function renderBlock() {  
  const title = "pre  block";  
  return title.padEnd(14, " ");  
}
```

## ROTATED PRE

This block is transformed so Firefox uses native line quads instead of the polyfill path.

```
if (line.startsWith("  ")) {  
  rows.push(line);  
  render("keep  spaces");  
}
```

## SCALED NOTES

Columns rely on fixed-width spacing and should keep their alignment.

| column A             | column B | column C     |
|----------------------|----------|--------------|
| alpha 01             | beta 02  | gamma 03     |
| keep this padding -> |          | exactly here |
