

## CODE BLOCK

Padding, indentation, and repeated spaces should survive extraction and rendering.

```
if (line.startsWith(" ")) {  
  rows.push(line);  
  render("keep spaces");  
}  
  
function renderBlock() {  
  const title = "pre block";  
  return title.padEnd(14, " ");  
}
```

## ROTATED PRE

This block is transformed so Firefox uses native line quads instead of the polyfill path.

column A  
alpha 01  
keep this

## SCALED NOTES

Columns rely on fixed-width spacing and should keep their alignment.

| column B   | column C     |
|------------|--------------|
| beta 02    | gamma 03     |
| padding -> | exactly here |
