

Embedded documents can now join the export.

This demo mixes a same-origin iframe that loads another demo file with a rotated iframe rendered from srcdoc content. Enable `walkiframes` to traverse those nested documents and keep them in the same paint-order p

Embedded existing demo

The left frame points at `text.html`, so this page exercises same-origin iframe walking across a nested file load instead of only inline markup.

Transformed iframe

The right frame is rotated slightly so iframe descendants have to inherit the iframe v
