

# Editorial Systems

Font stacks, weight and style cues, vertical writing, and transformed text should survive into the exported HTML and SVG without collapsing back to a single fallback face.

## DISPLAY AND EDITORIAL COPY

### VARIABLE CADENCE

A serif note can keep its  
rhythm, ornament, and  
spacing even after the line  
is extracted into vector-  
safe text output.

```
font-family: "Monospace Neon", "Consolas, monospace; font-style: normal; font-weight: 600; letter-spacing: 0.04em;
```

RTL SIGNAL

## MIXED TEXT ROLES

### INTERFACE STACK

"Mona Sans", "Segoe UI", sans-serif keeps a humanist fallback instead of collapsing to a generic face.

### DOCUMENT STACK

Georgia and Times stay available when the preferred face is missing.

### SYSTEM NOTE

Native quads carry rotated text geometry, so transformed runs can keep their live layout when the browser exposes ``getBoxQuads()`` directly.
