

CODE BLOCK

Padding, indentation, and repeated spaces should survive extraction and rendering.

```
function renderBlock() {  
  const title = "pre  block";  
  return title.padEnd(14, " ");  
}
```

ROTATED PRE

This block is transformed so Firefox uses native line quads instead of the polyfill path.

```
if (line.startsWith("  ")) {  
  rows.push(line);  
  render("keep  spaces");  
}
```

SCALED NOTES

Columns rely on fixed-width spacing and should keep their alignment.

column A	column B	column C
alpha 01	beta 02	gamma 03
keep this padding ->	exactly	here
