

CODE BLOCK

Padding, indentation, and repeated spaces should survive extraction and rendering.

```
function renderBlock() {
  const title = "pre block";
  return title.padEnd(14, " ");
}
```

ROTATED PRE

This block is transformed so Firefox uses native line quads instead of the polyfill path.

```
if (line.startsWith(" ")) {
  rows.push(line);
  render("keep spaces");
}
```

SCALED NOTES

Columns rely on fixed-width spacing and should keep their alignment.

```
column A      column B      column C
alpha 01      beta  02      gamma 03
keep this padding -> exactly here
```
